

To create your own check signature that will automatically print on your checks, you will need to sign your name within the frame shown. Then print out this page with your signature on it and scan it into an application that will allow saving the image as a .bmp file. Be sure to save just the signature image without the frame into the c:\checkit\system directory with the filename signature.bmp. The full pathname for the file again is

c:\checkit\system\signature.bmp

#### ALTERNATE METHOD

1. Print this page
2. Sign the printed page within the frame
3. Scan the signed page into a word processor that will allow output to a .bmp file
4. Output the signature only to c:\checkit\system\signature.bmp

Once you do this, you will no longer need to sign your Checkit! printed checks.
